What is your primary way to get to health care centers?
How did you get to your health care appointment today?

- Car
- Walk
- Bike
- Got a ride
- Public transportation
- Other:

How long do you leave before your appointment from your house?
Total time taken out of the day (Mins)

How much travel time does it actually take to get here from your home?
Total travel time (Mins)

Where do you currently live?
Please give the intersection closest to your home (and zip code)

Patient displaced to Chelsea

"It's worth the ride [to SJPHC] even though I live near MA General Hospital"

People don't change

Patient displaced to Worcester

"I've been going here for 20 years. I know all of the nurses and doctors. They would never let me go to another hospital."

even

Budgeting extra time helps people avoid being late to appointments due to public transportation

87% of people were rarely or never late to appointments because of public transportation

“I leave early because the buses are usually off or the schedule is off”

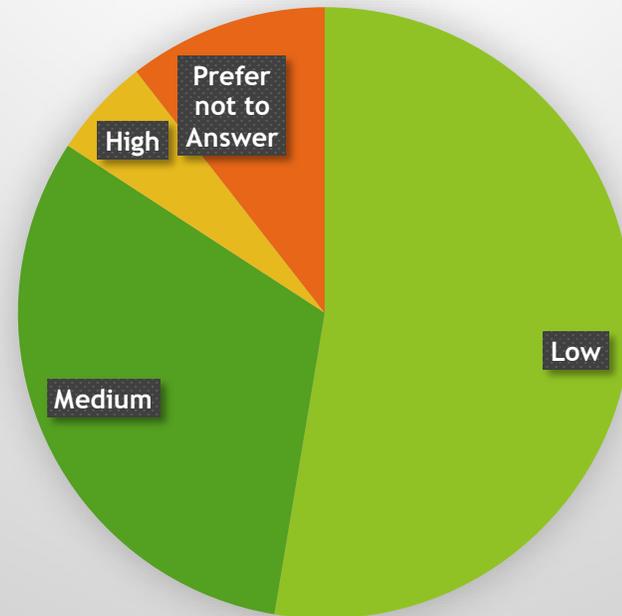

“I have the [MBTA] bus app and sometimes it will be way off of when the bus actually comes”

Budgeting extra time helps people avoid being late to appointments due to public transportation

Patient's Home	Community Health Center	Time Budgeted (minutes)	Time Actually Taken (minutes)	Extra Time Budgeted (minutes)
Chelsea	Jamaica Plain	90	80	10
Dorchester	Bowdoin	10	4	6
Dorchester	Dimock	60	14	46

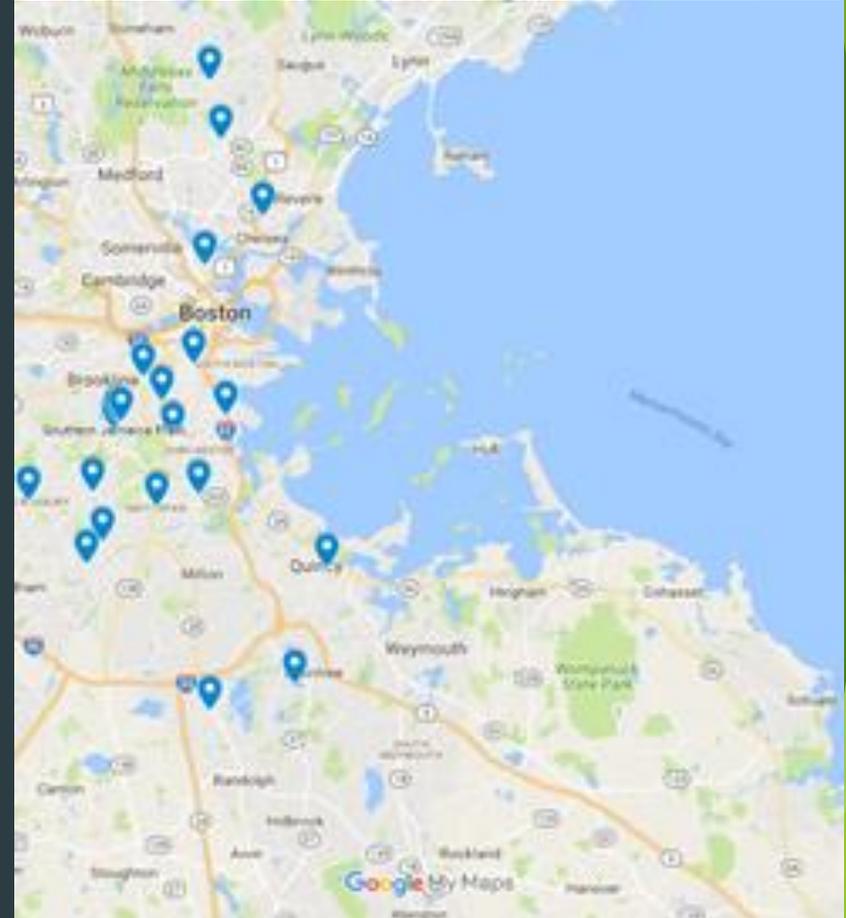

Figure 11: Locations of Respondents Who are not Worried About Gentrification

Recommendations

Build a closer network between different community health centers throughout Boston

- ▶ Health Centers more aware of the distance and commutes patients face to make it to their health appointment
- ▶ System where patients who can't make it all the way to their preferred health center can attend a closer one
 - ▶ Health center can help find an available time at closer health center

Connect low-income residents to non-governmental organizations (NGO's) in Boston

► Advantages

- Fight unfair evictions
- Aid distribution, shelter, health, water, sanitation, nutrition and education projects
- Hand flyers to residents displaced or risk of being displaced after survey
- Effort to connect residents with a community organization would benefit the researchers, the organization, and the resident

“I’m not worried [about displacement] because of the NGO in my neighborhood, they help out with stuff like that.”

Thank You!

Questions?

Question Topics

- ▶ Other Findings
- ▶ Other Recommendations
- ▶ Survey Tool Stuff
- ▶ Other Stories
- ▶ Facts & Figures

Other Stories

- ▶ Respondent who had to move to a shelter
- ▶ “What do you mean why? I’ve been going there forever”
- ▶ Professor Seth who lives in Quincy
- ▶ Family Van

Other Recommendations

Provide more support to patients based on where they are coming from for their health care appointments

- ▶ Health centers should become more aware of patients' length of commute when scheduling and making appointments
 - ▶ May try to keep track of which patients face difficulties with their commute and counteract them with more lenient windows of time for patients to come for appointments
 - ▶ Leniency could allow for better health care access for patients travelling significant distances

Offer public transportation between where people reside and their old communities

- ▶ We recommend that a transportation system be implemented that has the ability to take residents from their current neighborhoods to their desired locations in other neighborhoods
 - ▶ Would cut down on the uncertainty of time in people's commutes when trying to get to their appointments
 - ▶ Reduces the amount of time patients take out of their day to commute
- 

Facts & Figures

21	Car	45	15					2131	
22	Car	25	20					2124	

Other Findings...

The amount of time needed to take public transportation does not influence one's decision to attend their health appointments

- ▶ 71 % of respondents said they would still go to their health center if sick despite distance and length of commute

People who took public transportation budgeted more time to get to health appointments than those who did not

- ▶ Average time budgeted for public transportation users: 60 minutes
- ▶ Average time budgeted for non-public transportation users: 43 minutes
 - ▶ This was despite people who drove often travelling a further distance than those who took public transit because they were out of the range of service for the MBTA

When people were late to or missed their appointments, it is primarily due to unpredictable transportation schedules

- ▶ *"I have the [MBTA] bus app and it will sometimes be way off from when the bus actually comes."*
- ▶ *"I use the [MBTA] app and sometimes it will say a bus is coming in 1 minute, but it actually comes in 5"*
